

A Very Minimal Flipbook

Gina Reynolds, Feb 9, 2020

If you don't have them already...

do the following installation in your console:

```
install.packages("tidyverse")
```

```
install.packages("xaringan")
```

```
devtools::install_github("EvaMaeRey/flipbookr")
```

```
fast_cars %>%  
  # this demos SLOWggplot  
  # 1. aes is pulled out of  
  # ggplot statement  
  ggplot() +  
  # 2. aesthetics are listed  
  # one by one  
  aes(x = speed) +  
  aes(y = dist) +  
  # 3. required aesthetics come  
  # before geoms that require  
  # them so partial code does  
  # not break - these are positional  
  # x, xmin, xend, y, ymin, etc.  
  # and label  
  geom_point() +  
  # 4. aesthetics that are not  
  # required - like color  
  # so that flipbook reader  
  # sees feedback  
  aes(color = dist) +  
  scale_color_viridis_c()
```
